

THE TIME FACTOR

Oil Markets

Successful Forecast: In late 2014, lower oil prices will come

NOVEMBER . 2014

US OIL PRICES since 1861

*All of these significant turning points in Oil are related to **The TIME FACTOR***

Master time cycles have called the last three major crude oil tops

In 2014, shortly before the plummet in US Crude Oil prices occurred, I wrote to friends and colleagues outlining that I was expecting the price of oil was “headed much lower”.

My analysis of the major time cycles affecting the oil market since 1861 had led me to believe that the highs of 1920, 1980 and 2011 were all interconnected, and that a significant price fall was due to occur some time near the end of 2014 / early 2015.

This naturally led me to believe that Australian energy stocks were also due for a sharp correction, and I warned friends and colleagues to expect 10-20% price corrections in a number of these stocks.

By incorporating the **Time Factor** into my analysis, I was able to identify well in advance that late 2014 was not the right time to buy oil and other energy related stocks.

In my course **Trading with the Time Factor**, I share with you the techniques that I applied in this analysis, including the use of trend lines and how to identify the long term **Master Time Factor** cycles.

**“Crude Oil is headed much lower...
there was a significant break of the
trend line at around \$88.00 which
signalled much lower prices to come.”**

- Written forecast: Nov 2014

US Light Crude (USD/bbl)

*A break of the trend line and **The MASTER TIME FACTOR** indicated oil prices were due to go much lower*

US Light Crude (USD/bbl)

*A break of the trend line and **The MASTER TIME FACTOR** indicated oil prices were due to go much lower*

AUSTRALIAN ENERGY STOCKS

2014 FORECAST:

Falls of 20% will follow

**“This stock looks in a weak position
and headed toward price support at
\$10.00 to \$10.40”**

- Stock price at time of writing: \$12.78

Santos Limited (STO.AX)

FORECAST: THIS STOCK WILL FALL BY AS MUCH AS 20%

In early November, when a major Australian energy company was trading near \$13.00, I wrote to friends and colleagues outlining that the stock was headed over 20% lower. The accompanying chart was sent with my note. Within weeks, a price fall of over 45% had occurred in its stock price.

“This Fibonacci level has currently held”

“Expect that level to be retested and broken for further downside”

(written email and chart sent to friends and colleagues)

Santos Limited (STO.AX)

FORECASTING TOOLS EXPLAINED IN DETAIL

In my analysis of STO.AX, not only was I looking at the MASTER TIME FACTOR, but I was also paying close attention to my trend line indicators as well as the use of Fibonacci Price Levels. In **Trading with the Time Factor**, I explain how easily these tools can be applied to your market analysis.

In addition, I share with you the reasons why I believe certain breaks of key Fibonacci Price Levels need to be watched, and why they can be very useful in predicting higher or lower prices in your chosen stock, commodity or currency analysis.

Once the key Fibonacci Level was broken, it indicated much lower prices to come. A fall of over 45% soon followed within weeks.

In Trading with The Time Factor, I show you how to identify these Levels and how to apply them in your own analysis.
