

THE TIME FACTOR

Commonwealth Bank of Australia (CBA.AX)

Successful Forecast: Major top and 14% price fall

FORECASTING A 14% PRICE DROP... to within cents of the low!

How many times have you wished your stock broker would call you and give you a tip that one of the biggest stocks on your local stock market is about to fall by over 10%?

Wouldn't it feel even better if it were you on the other end of the phone line giving him or her the tip instead?

Well, in 2002 I did just exactly that.

Only hours after trading in Australia's single largest listed company had closed for the day, I had identified that it was the time to sell. Not only that, I gave to my stock broker, in writing, my price target which called for a 14% decline in the share price, which was accurate to within 4 cents.

A number of the trading indicators described in **Trading with the Time Factor** were present at the time of my forecast. In particular, the use of Time & Price Angles and my own unique interpretation for timing the market which I call **trading to Time**.

Each of these indicators are described in detail in **Trading with the Time Factor** along with many more forecasting tools and techniques.

Most importantly, these indicators are explained simply so that anyone can apply them to their own stock market analysis.

“As you can see, there is not one but two Time & Price angles which are calling for a top on 12 Sep 2002.”

- Written forecast:

After market close, 12 Sep 2002

Commonwealth Bank of Australia (CBA.AX)

Commonwealth Bank of Australia (CBA.AX)

FORECASTING MAJOR HIGHS & LOWS - trading to Time!

*Each of the significant turning points marked in the chart of CBA.AX all occurred on what I call – **trading to Time dates!***

***In Trading with the Time Factor** I explain to you how simple it is to calculate these dates into the future and how they can be applied to any stock, currency, commodity or equity index.*
