

THE TIME FACTOR

# S&P ASX 200

*Successful Forecast: Major high 2003*

DECEMBER . 2012

**“Watch out for our time date  
around Jan 7th... 90% of the  
time it is a top.”**

*- Written forecast:  
(to my stock broker): 8 Dec 2002*

**“...when the market decides to run up into this date, it gives us a warning bottom around the 17th December... so this is basically what we are watching out for”**

*- Written forecast:  
(to my stock broker): 8 Dec 2002*

# S&P ASX 200

## ONE EMAIL... TWO SUCCESSFUL FORECASTS... TO THE EXACT DAY... ALL IN ADVANCE!

In late 2002, I wrote to my stock broker providing him with my timing calculations for the Australian stock market over the next few weeks ahead. Whilst the rest of the market had become wildly bullish, my timing calculations were indicating that a major stock market top was due.

The first of my calculations called for a market 'bottom around 17 December 2002' where I then expected the ASX 200 would run up to higher prices and make a top on my forecast date of 7 Jan 2003.

Both calculations were correct and a 14% fall in Australian stock prices immediately followed.

A number of the trading techniques described in **Trading with the Time Factor** were all present when I made this forecast. These included the use of Pitch Lines, repeating Sections of the Market and finally my own **trading to Time** indicator.

All of these techniques, plus many more are described in detail in my course **Trading with the Time Factor** – and explained, simply.
